Profile

Game developer with more than five years of professional experience building HTML5 games with TypeScript and Cocos Creator. I currently work at Linko Studios, an exclusive studio partner of Games Global, developing slots for regulated online casinos. Before that I built casual and multiplayer games for Pogo (Electronic Arts) at Monti Games and Magic Media. I hold a degree in Multimedia Engineering and founded Frasquito Games, the brand under which I publish my independent projects.

Experience

Linko Studios | Games Global — 11/2024 – present

Game Developer

HTML5 slot development for online casinos. I take part in the whole life cycle of the games, from the early stages through launch and later maintenance: I implement mechanics and features, look after performance and how each game adapts to mobile and desktop, and work with the art, design and QA teams to take each title to production.

> **Unannounced project** — Lead on client development
> A new slot from the studio where I carry most of the client development: new features and their server integration, load-time optimization and adapting the game to phones and tablets.
>
> **Unannounced project** — Project kick-off and support
> Prepared the game base, assembled the art and animations, and built the first versions of the interface controls and their layouts. Occasional support for the team afterwards.
>
> **Pachinko Linko 5** — Second title in the series
> Spine-animated character system, coin rain with a shader-based fireworks finale, quick-speed popup, layout rework for any screen ratio, sound, per-market localization and QA bug fixing.
>
> **Linko 5** — The studio's debut title (02/2026)
> Free spins, Linko Wheel, wilds and their animations, recovery of interrupted rounds, sound system, portrait and landscape views, and bug fixing through to launch.

Magic Media | Pogo, Electronic Arts — 12/2023 – 09/2024

TypeScript Game Developer

Worked in a multidisciplinary team (design, art, development and QA) for the Pogo platform. Besides the game itself, I built support tools such as the game balancing simulator.

> **Pogo Slots** — Expansion, lobby and improvements
> My first experience with slot games. We expanded the game with a new title, refreshed the lobby, improved the user experience and added content.

Monti Games | Pogo, Electronic Arts — 05/2021 – 08/2023

Game Developer

Engineering team dedicated to developing and maintaining casual games for Pogo, the Electronic Arts web platform. I also updated the shared frameworks and SDKs.

> **Risk: Pogo Domination** — Refactoring and performance
> Full refactor to improve performance and maintainability: new features, logic moved from client to server, better player synchronization and restoring abandoned games.
>
> **Yahtzee: Wild!** — Built from scratch
> Client and server logic and mechanics, game state restoration, matchmaking, rewards, FTUE and performance improvements.

> **Scrabble: Crossword Game** Rebranding and maintenance
> Graphical and mechanical update of an existing game, with support mainly on the client side.

Frasquito Games | Independent projects **01/2018 – 05/2023**
Game Developer

My own brand, under which I design, develop and publish my games (frasquitogames.com). They include Touch the Coin, released on Google Play with PhaserJS, and Pet Balls, built with Cocos Creator.

Education

Bachelor's Degree in Multimedia Engineering | University of Alicante 2012 – 2017

High School Diploma in Science and Technology | IES Herminio Almendros, Almansa 2010 – 2012

Skills

Engines and frameworks: Cocos Creator, PhaserJS, Unity, Godot, SFML

Languages: TypeScript, JavaScript, C/C++, C#, HTML, CSS

Testing: Jest, Cypress

Tools: Git, Jenkins, Spine, Jira, Trello, Perforce

Spoken languages: Native Spanish, English level B1

Strengths: Teamwork, proactivity, self-management
